- Customisable specialization
- Internal placement opportunities

Get trained by the best in the business on the most sought after fields.

- Software Developement
- DevOps
- Project Management
- Product Design

Enhance your skills with special training in

- Communicative English
- Machine Learning

SPECIAL DISCOUNT FOR STUDENTS!

archis academy

Who are we?

A team of dedicated professionals from the software industry who have come together to address the gap between 21st-century skills and employability.

## Non-tech degree?
Creative mind?
Leadership skills?
Communication skills?
An eye for mistakes?

The software industry has a place for all of you!

Interpersonal communications training, Job-hunting and interview preparation comes free with every course!
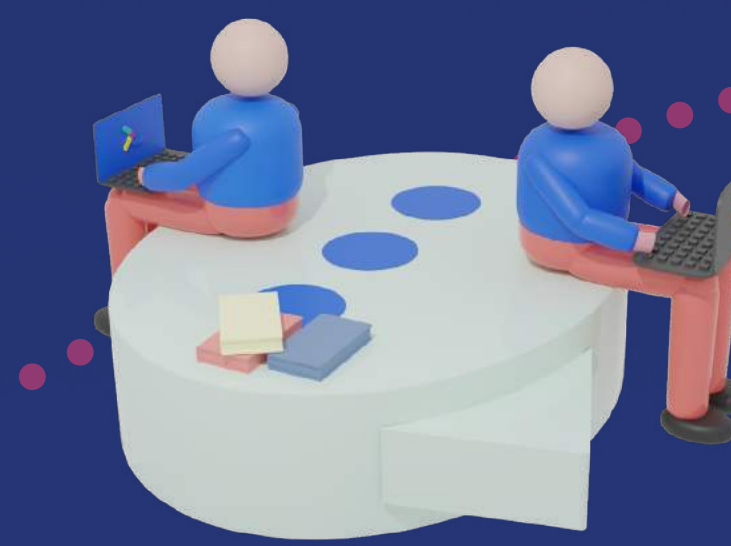

Project Management

Do you like getting things done? Do you have people and management skills? Then you are at the right corner of the page! Learn project management methodologies like agile, scrum, kanban, workflows, and much more while mastering the latest technologies used in the industry. Manage real teams and buil experience along the way!

Software development

From introductory courses to mastering cutting-edge tools... Learn the most in-demand modern software frameworks and follow your passion in front-end, back-end, full-stack by working on live projects with a remote team from all over the world. Build your portfolio along the way!
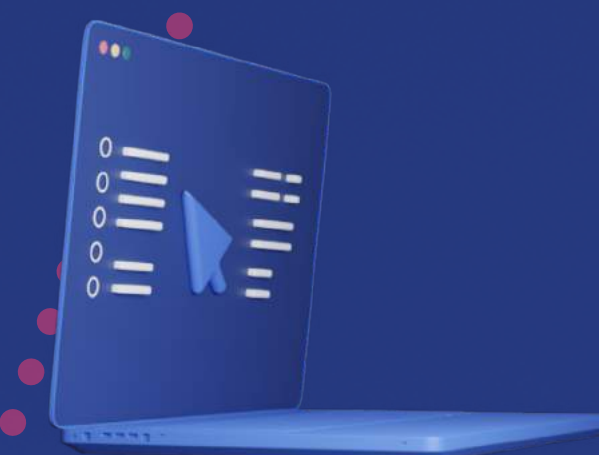

Communicative English

Learn how to become a powerful speaker of English! Improve your ability to speak and write in English in both social and professional interactions, learn skills that you can apply to business negotiations, interviews, written reports and emails, and professional presentations in international contexts!

Product Design (UI/UX)

Take your thought process one step ahead... Spark your creativity by turning it into a product. Learn about critical thinking, design techniques, web design, UX research, UI design, and interaction design. With various tasks and projects, get your portfolio ready!

Machine Learning

Be the pioneer! Gather, prepare, analyze the data, build and train your model without any prior knowledge in this field. We made it easier to master Machine Learning concepts and use automated technologies from zero to the deployment of your model. Enjoy learning the theoretical aspects while practicing real-life applications!

DevOps

Not so much of a coder but interested in the complete process? Learn how to combine people, technologies, processes, and services by excelling in various technologies such as containers, cloud providers and so much more... Build your knowledge base and experience in a real development environment!

What do we do?
